

The Multi-messenger Treasure TROVE: a Tool for Rapid Object Vetting and Examination

Northwestern

Nick Vieira
on behalf of the TROVE team
AAS 247 | Phoenix, AZ
5 January 2026

Multi-messenger is hard

- Multi-messenger observations yield more than the sum of their parts: cosmology, neutron star EoS, origin of the heavy elements, and more!
- Gravitational waves produce large localization regions with confidence regions $\sim 10^2 - 10^3$ deg

Multi-messenger is hard

- Even exceptionally well-localized events like GW190814 will have dozens of candidate counterparts in their localization region—many never classified!

Vieira+20

Multi-messenger is hard

Vieira+20

- Even exceptionally well-localized events like GW190814 will have dozens of candidate counterparts in their localization region—many never classified!
- **How do we efficiently spend finite resources to find electromagnetic counterparts to these events?**

TROVE!

ingest:

gravitational waves

candidate counterparts

galaxy, point source, and variability catalogs

AGN catalogs

candidates' photometry

score based on:

position in 2D localization

distance to host

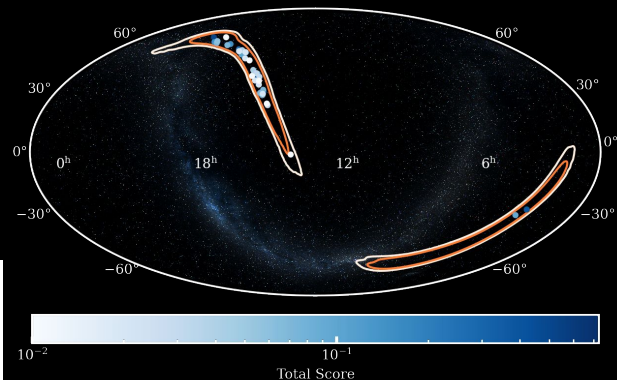

association with point sources / asteroids

association with AGN

photometry

TROVE on S250818k and AT 2025ulz

Led by Noah Franz,
UofArizona grad student

Franz+25 (ApJL, 994, 2, L45)

TROVE on S25112cm

Vieira et al, in prep

Merger of 1-2 subsolar mass object(s), unlikely to contain an object of $1-3 M_{\odot}$

Vet candidates considering multitude of viable transients:

- kilonovae
- KNe-in-SNe
- super-KNe

Also searched for BBH-induced AGN flaring

We're using Rubin data!

Recently-released Rubin photometry brought our total number of candidates for S251112cm from 166 to **231**.

dozens of optical, X-ray, gamma-ray observatories

Rubin alone!

Optimizing follow-up with tools like TROVE will be critical in the Rubin era.

What we've learned:

- We can effectively score candidates as kilonovae to optimize follow-up
- The candidate counterpart to S250818k which received the most attention wasn't the highest scoring!

What to expect from us:

- Application to subsolar mass event S251112cm, expansion to new classes of transients
- TROVE 1.0 (web app and API)
- TROVE 1.0 applied to O3 and O4
- Documentation & tutorials; workshops at conferences
- Slack space for TROVE users
